Placental endocrine disruption: a critical link between maternal exposure and child health

**M-LEEaD Center**
**Winter Seminar Series**

• Wednesday, March 21, 2018
• 12:00-1:00 PM
• 3755 SPH I

Dr. Adibi’s research focuses on the early pregnancy origins of exposure-related risk to the long-term health of the child. Through experimentation and analysis of the placental exposure pathways, her research searches to provide practical knowledge that can be applied to early pregnancy to establish sources of risk to the fetus.
