DEMOlITION IS HAPPENING

WHAT YOU SHOULD KNOW

Photo Credit: Associated Press
Dedication

We wish to dedicate this handbook to Detroit and Southeast Michigan residents who experience demolitions in their community. We hope that this handbook will address the concerns you have raised regarding the health and safety of your community during demolitions.

Special thanks to hard work of the University of Michigan Environmental Health Science Core Center Community Outreach and Education Core for making this handbook possible, and in particular thanks to the NIEHS Center in Urban Environmental Health at The Johns Hopkins Bloomberg School of Public Health who allowed us to use their *What to Do about Demolition Hazards* as a model for this handbook.

Support provided by grant P30ES017885 from the National Institute of Environmental Health Sciences-National Institutes of Health
Urban Demolition

Some Important Things to Know

• Sometimes all or some of the houses on a block are demolished.

• Demolition includes knocking down houses, removing debris, and covering the site with dirt or gravel.

• The entire job can take 2 to 3 weeks. Most of this time is usually spent taking away the debris in trucks.

• Demolition work usually takes place between 7:00 a.m. and 3:00 p.m.

• Community concerns about demolition include dust, lead, allergy and asthma, safety, rats and cockroaches, waste water, noise and vibration.

• It is important to know what to do about these potential hazards.
LEAD IN DUST

WHAT TO KNOW:

- Demolition creates dust.
- This dust can get into your house.
- Dust from demolition can have lead in it.
- Children can swallow lead dust when they put dust covered toys and fingers in their mouths.
- Lead poisoning can cause learning, behavior, and health problems in children.

WHAT TO DO DURING DEMOLITION AND DEBRIS REMOVAL:

- Plan to be away from your home during the demolition work, if possible.
- Keep your windows and doors closed and keep pets inside.
- Do not hang laundry outside.
- Cover all gardens and soil beds with plastic tarp.
- Place floor mats inside all entryways to wipe the dust off your shoes.
- Remove shoes at entry.
- Wet mop floors and vacuum carpets every day.
- Wash window sills and window wells every day.
- Hose down outside furniture and surfaces around your house every day.
Wash window sills and window wells every day when demolition and debris removal are underway.
ALLERGY & ASTHMA

WHAT TO KNOW:

• Demolition creates dust.
• Dust may cause allergy and asthma symptoms

WHAT TO DO DURING DEMOLTION AND DEBRIS REMOVAL:

• Plan to be away from your home during the demolition work, if possible.
• Keep your windows and doors closed.
• Place floor mats inside all entryways.
• Wet mop floors and vacuum carpets every day.
• Wash window sills and window wells every day.
• Hose down outside furniture and surfaces around your house every day.

SAFETY

WHAT TO KNOW:

• Demolition sites are dangerous, and children are at risk for being hurt.
• Vacant houses marked for demolition are not safe.
• Heavy equipment and tools used during demolition can be dangerous.
• Demolition creates piles of unsafe debris.
• Vacant lots left after demolition may become a dumping site for dangerous materials and trash.

WHAT TO DO:

• Keep children away from vacant houses.
• Keep children away from demolition site.
• Watch your children more closely during demolition. Keep children away from heavy equipment, from demolition debris and vacant lots.
• Do not stand nearby and watch demolition work.
• Remove or secure pictures and wall hanging to prevent them from falling during demolition.

WHO TO CALL:

Ask workers for Demolition Contractors contact information
RATS & PESTS

WHAT TO KNOW:

• Vacant houses can have rats, mice, roaches and other pests.
• Rats, roaches and other pests may live in debris piles.
• Trash on the vacant lot attracts these pests.
• Rats, mice, and roaches can get into your home.

WHAT TO DO:

• Avoid extermination of pests and the use of harmful chemicals
• Prevent the pest from entering by sealing with caulk any holes in your homes foundation that are larger than 1/4 inch
• Fix plumbing and water leaks. Some pests like warm moist environments.
• Keep trash in a closed metal container.
• Report dumping of trash on vacant lots.
• If rats and mice are still a problem you may think of getting an energetic cat.
WASTE WATER

WHAT TO KNOW:

• Water sprayed during demolition can settle around the site in cracks and puddles.
• Water from a demolition site can enter your basement and can cause mold to grow.
• Mold can cause allergy and asthma symptoms.

WHAT TO DO:

• Keep children from playing in or near puddles.
• Dry your basement as soon as possible.

WHO TO CALL:

If water from a demolition site enters your basement, call:
- Site Contractor
- Your property owner
- Your insurance Company

For wet vacuum rental and dehumidifier purchase or rental:
- Call or visit your local hardware store
NOISE AND VIBRATION

WHAT TO KNOW:

• The area around a demolition site can be noisy because heavy trucks and equipment are used.
• Wall hangings can fall down due to vibration from the equipment.

WHAT TO DO:

• Plan to be away from your home during the demolition work, if possible.
• Use earplugs to reduce noise.
• Remove or secure pictures and wall hangings to prevent them from falling.

WHO TO CALL:

If damage occurs during the demolition, contact:
